

Bring a Container-Based Operation to Life

ATTUNE® CloudTrade

Quickly deployable solution for new businesses, better user experience, and superior customer satisfaction.

The intelligently equipped container streamlines user experience and greatly improves customer satisfaction. Instead of using outdated tools for example a plain container, get ahead of the competition by using the most innovative smart-container technology. Finn-ID Oy enables the conversion of a “cold and dumb” container, into an intelligent and productive operation.

This versatile tool can be used in virtually any business to keep things running smoothly, cutting down unnecessary costs and errors along the way, keeping customers as well as businesses happy. An intelligent container is an insignificant investment when compared to the time and money it will save in the long run, as all great advancements in technologies have in the past.

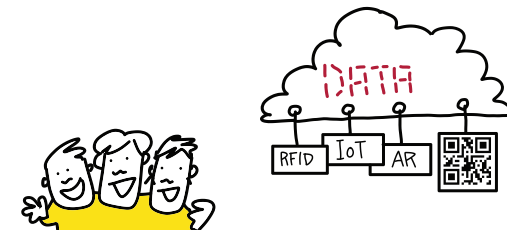

We offer a simple and easy-to-use, cloud-based solution to container/confined space applications. The application can be customized according to customer needs and delivered as turn-key, with the option of customizable features. We are a Finnish, full-service company with over 30 years of experience. We can also provide mobile terminals, as well as professional labeling materials for these container applications.

FINN-ID

Finn-ID Oy is a full-service company - in addition to software application we also supply marking, reading, printing terminals, and labeling materials.

*Fully customizable,
from manual to fully automated solutions.*

Easy-to-use solution

This easy to use technology allows for effortless transactions for individuals, businesses, and everything in between. The end users' processes are as easy as these four simple steps:

1. The user logs in to the app
2. After authentication, the smart lock opens and allows access
3. The desired items are scanned by barcodes or QR codes by using the user's own mobile device
4. Once everything is done, they will simply sign to acknowledge the goods were collected

Benefits for a container owner/operator:

- ✓ The container operator receives real-time information on the rented/retrieved products and can utilize the data, for example, to supplement the contents of the container, or to forecast the seasonal demands.
- ✓ Documentation and reporting are automated and, in the cloud, always available with any internet enabled device.
- ✓ Costly, and inevitable human errors during transactions are eliminated because the products are scanned directly into the system.
- ✓ Quick and effortless user experience leads to higher customer satisfaction.
